

## CONNECTING THE HITACHI PROJECTOR TO A LAPTOP

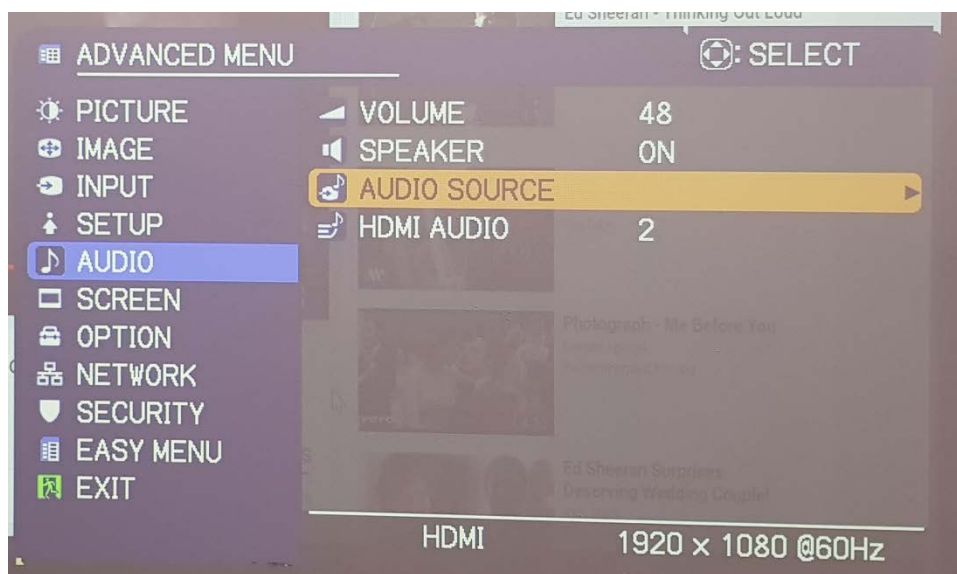

### BY HDMI CABLE

HDMI Cables

If you are playing a video or a presentation that has sound, please note that the default setting will channel the audio to output from the projector's speakers.

You may adjust the volume through the projector's Menu button → Advanced Menu → Audio -> Volume

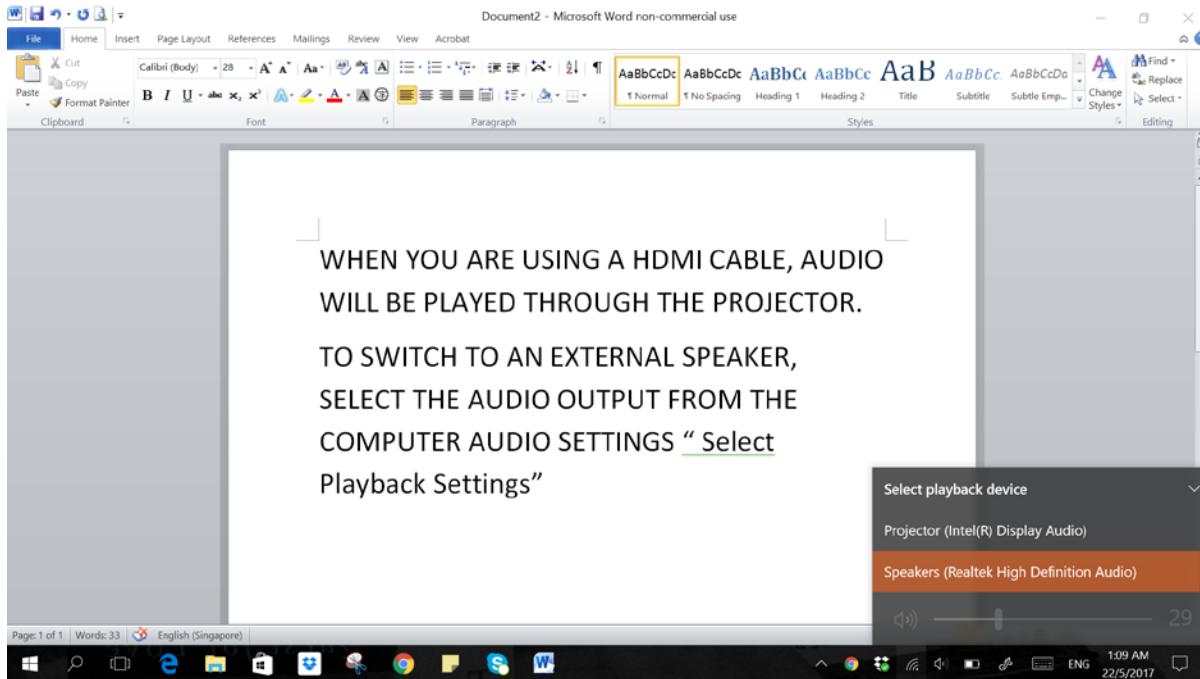

**PLEASE TURN OVER FOR MORE AUDIO SETTINGS**

## **USING AN EXTERNAL AUDIO OUTPUT**

If you would like to use an external speaker to playback the video, select within your computer's volume settings at the bottom right corner on the taskbar:

- Select the playback device, "Computer speakers". Use a 3.5mm audio cable to connect your laptop's audio output to the input of an external speaker.

## **BY VGA CABLE**

If you use a VGA cable, plug into the VGA port directly.

For VGA ONLY Projectors and Laptops with no VGA ports, use an adapter like below

## **TURNING OFF THE PROJECTOR**

Press the "STANDBY|ON" power button twice. Wait for about 2 minutes for the fan to stop spinning before unplugging the power cable
